Noted instrument panel manufacturer Classic Dash now offers a contemporary 6-gauge upgrade for 1982-84 Pontiac Firebird/Trans-Am applications. The bolt-in replacement panels are made of rugged UV-resistant ABS composite material and available in matte black, brushed aluminum or carbon fiber finish.

Available with a large variety of Auto Meter instruments, the most popular packages include a 5" diameter speedometer and tachometer, plus 2-1/6" diameter oil pressure, water temperature, voltage and fuel quantity gauges. Replacing the clunky factory gauges allows Firebird owners to easily monitor all important functions and have the ability to take advantage of optional GPS technology.

Easily installed using common tools, a complete wiring harness is available—as are accessories to facilitate LS engine swaps. Detailed instructions are included. Panels are available without gauges for \$279.95.

To see the Firebird panel in different finishes with the various available Auto Meter gauge styles visit www.ClassicDash.com, or call 866-882-3525 to speak with a tech rep. Panels are manufactured in-house at Classic Dash's Carson City, NV facility.
